According to our (Global Info Research) latest study, the global Succulent Plant market size was valued at USD 5079.9 million in 2023 and is forecast to a readjusted size of USD 15370 million by 2030 with a CAGR of 17.1% during review period.

Succulent plant, also known as succulents, are plants whose parts thicken, are succulent, and are full of food. The leaves, stems, or roots of these plants become more fleshy than usual due to the development of aquifer tissue. Succulents are higher plants with hypertrophic vegetative organs, usually with three vegetative organs: root, stem and leaf, flower, fruit and seed. Compared to other plants, succulents survive easily, do not require the care of the breeder for a long time, and are radiation proof, decorative and air purifying. Succulents need little maintenance to survive indoors. Because it is the houseplant with very strong adaptability, can flourish below all sorts of indoor conditions.
