The suction type ultrasonic emulsifier is an ophthalmic surgical device that integrates emulsification, crushing, perfusion and suction functions. Its core is to effectively crush the intraocular tissue through high-frequency sound waves, and use the suction system to suck out the crushed tissue to complete the surgical operation. With the continuous advancement of modern medical technology, the suction type ultrasonic emulsifier has gradually emerged, and with its low energy and high negative pressure characteristics, it has gradually replaced the market position of some dynamic ultrasonic emulsifiers.
