Abstracts

According to our (Global Info Research) latest study, the global Sugar Alcohols market size was valued at US\$ 5801 million in 2024 and is forecast to a readjusted size of USD 7598 million by 2031 with a CAGR of 4.0% during review period.

Sugar alcohols, also known as polyols, are organic compounds, typically derived from sugars, containing one hydroxyl group (-OH) attached to each carbon atom. They are commonly white, water-soluble solids that can occur naturally or be produced industrially by hydrogenating sugars. Since they contain multiple (-OH) groups, they are classified as polyols. Common sugar alcohols are mannitol, sorbitol, xylitol, lactitol, isomalt, maltitol and hydrogenated starch hydrolysates (HSH).

As consumers become increasingly health-conscious and seek to reduce their sugar intake, the demand for low-calorie and sugar-free products is on the rise. Sugar alcohols, with their ability to mimic the sweetness of sugar without the calories, are widely used in foods, beverages, and snacks, creating significant growth potential in the market.

The global rise in diabetes and obesity rates has led to a shift toward sugar alternatives that support healthier diets. Sugar alcohols, which have a lower glycemic index compared to regular sugar, are being used in diabetic-friendly and weight-management products, further fueling market growth.

Sugar alcohols are not only popular in food products but also gaining traction in pharmaceuticals and personal care items, where they are valued for their sweetness, moisture retention, and stability. These qualities open growth opportunities as companies continue to innovate with sugar alcohols in formulations for medicines,

toothpaste, and skincare products.
