Abstracts

The global Sugar Cane Molasses market size is expected to reach $ 4745 million by 2032, rising at a market growth of 4.4% CAGR during the forecast period (2026-2032).

Sugar Cane Molasses is a dark-colored, highly viscous by-product generated during the sugar manufacturing process from sugarcane. It is produced after sugarcane juice undergoes clarification, evaporation, concentration, and repeated crystallization processes to recover sucrose, leaving behind a nutrient-rich syrup containing residual sugars. Sugar Cane Molasses typically contains significant amounts of fermentable sugars, including sucrose, glucose, and fructose, as well as minerals such as potassium, calcium, and magnesium, organic acids, amino acids, and small amounts of proteins. Characterized by its dark brown to black color, high viscosity, and excellent fermentation properties, sugar cane molasses represents a valuable co-product in the global sugar industry. Depending on processing requirements, it can be further converted into liquid molasses, concentrated molasses, and other value-added derivatives. Due to its high energy content and functional properties, Sugar Cane Molasses is widely used in animal feed, fermentation industries such as ethanol and yeast production, food processing, agricultural fertilizers, and bio-based chemical manufacturing. As the dominant molasses category worldwide, sugar cane molasses accounts for the largest share of the global molasses supply.

In 2025, global Sugar Cane Molasses production reached approximately 20 Million Tons , and average price was USD 170/Ton , with gross margin 30% .
