Abstracts

The global Sugar-Free Rice Cookers market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The principle of the sugar-free rice cooker is very simple. It is to cook the rice until it is half-cooked, wait for a part of the amylopectin to dissolve into the soup, drain the rice soup, pick up the half-cooked rice, and steam it further. The rice made in this way has a much lower glycemic index GI. People eat the same amount of food while taking in less glucose, but still have almost the same feeling of fullness, thereby controlling blood sugar.
