Abstracts

The global Sugar Free Soy Milk Powder market size is expected to reach \$ 1067 million by 2032, rising at a market growth of 5.9% CAGR during the forecast period (2026-2032).

Sugar free soy milk powder is a powdered plant-based beverage ingredient made primarily from soybeans through processes such as sorting, soaking, grinding, filtering, enzyme inactivation, concentration, and spray drying, without the addition of sugars like sucrose or glucose; it is characterized by portability, ease of storage, and convenience in preparation.

The upstream sector comprises non-GMO soybeans, food ingredients, packaging materials, spray-drying equipment, and testing services, while the downstream sector encompasses household consumers, foodservice, baking, meal replacements, plant-based beverages, retailers, and e-commerce platforms.

The global market for sugar-free soy milk powder has an average price of \$3,150 per tonne, a sales volume of approximately 220,000 tonnes, and an industry profit margin of 27%.

The global sugar free soy milk powder market will be driven by trends such as sugar-conscious diets, plant-based protein consumption, lactose intolerance, and the demand for convenient nutrition; products will evolve toward high-protein, low-fat, low-carbohydrate, and clean-label formulations. Companies will increasingly utilize non-GMO and organic soybeans as well as sustainable raw materials, while employing technologies such as deodorization, instant solubility, micro-encapsulation, and low-temperature processing to enhance flavor, solubility, and nutrient retention.

Consumption scenarios will expand from home breakfasts to include sports nutrition, weight management, elderly nutrition, coffee and tea beverages, and baked goods. Small-format and individual packaging, along with cross-border e-commerce, will broaden market reach, with brand competition centering on protein content, ingredient purity, certification compliance, and flavor differentiation.
