According to our (Global Info Research) latest study, the global Sulfide Cathode Materials market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Sulfide cathode materials, such as lithium sulfide (Li₂S), iron sulfide (FeS), and cadmium sulfide (CdS), are critical components in lithium-ion batteries. Their development plays a key role in improving the specific capacity and cycle stability of batteries. Researchers are focusing on optimizing the electrochemical properties of these materials through structural design and doping regulation. Some sulfide cathode materials, like lithium sulfide, have already entered commercialization and are widely used in lithium-sulfur and lithium-sulfide compound batteries. However, challenges such as capacity fade and structural instability during cycling still need to be addressed to enable large-scale commercial applications.
