Abstracts

According to our (Global Info Research) latest study, the global Sulfur-Carbon Composite Powder market size was valued at US\$ 247 million in 2025 and is forecast to a readjusted size of US\$ 418 million by 2032 with a CAGR of 7.8% during review period.

Sulfur-carbon composite powder is a key cathode material designed to optimize the performance of lithium-sulfur batteries. It is formed by uniformly combining elemental sulfur with various carbon materials at the nano/micro scale through physical or chemical methods. Demand stems directly from the urgent pursuit of breaking through the energy density limits of existing lithium-ion batteries in next-generation high-energy-density energy storage technologies (centered on lithium-sulfur batteries). Its upstream supply chain mainly includes suppliers of high-purity sulfur, as well as chemical raw materials such as porous carbon, graphene, and carbon nanotubes, binders, and conductive agents. Downstream, it directly serves R&D-oriented battery companies, high-end consumer electronics manufacturers, and special equipment manufacturers for manufacturing prototype batteries. The ultimate target market is high-altitude long-endurance drones, special aerospace power supplies, and future electric vehicles. In 2025, the production volume of sulfur-carbon composite powder is estimated at approximately 8,000 kg, with an average selling price of approximately US\$30/gram, a gross profit margin of approximately 45%, and a single-line capacity of approximately 200 kg/year.
