According to our (Global Info Research) latest study, the global Sulphate Removal Unit market size was valued at US\$ 130 million in 2024 and is forecast to a readjusted size of USD 195 million by 2031 with a CAGR of 6.0% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

A Sulphate Removal Unit is designed to remove sulphates and other dissolved salts from seawater or process water, primarily in offshore oil and gas operations. This process helps mitigate scaling and souring issues in reservoirs caused by sulphate precipitation and the growth of sulphate-reducing bacteria. Typically employing membrane-based technologies such as nanofiltration or reverse osmosis, SRUs ensure the production of low-sulphate water suitable for injection into reservoirs during enhanced oil recovery processes.
