'Sulphide Ore Flotation Collector' refers to a type of chemical reagent used in the flotation process of mineral processing, specifically for the recovery of sulphide ores. Flotation is a widely employed method for separating valuable minerals from gangue (waste rock) based on differences in their surface properties. In the case of sulphide ores, which contain valuable metals such as copper, zinc, lead, nickel, and others in their sulphide form, flotation collectors are added to the pulp (mixture of ore, water, and other reagents) to selectively adhere to the surfaces of the target minerals.
