The global Sulphur Bentonite for Agricultural market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Sulphur bentonite is a type of fertilizer that combines elemental sulfur with bentonite, a type of clay mineral. This combination helps to improve the handling and dispersion of sulfur in the soil, making it more accessible to plants. Sulphur bentonite is mainly used to provide sulfur nutrition to crops, as sulfur is an essential nutrient for plant growth and development. The slow release properties of the bentonite allow for a controlled release of sulfur over time, providing long-lasting benefits to the soil and plants.
