In this report, sulfur fertilizers above 75% mainly refer to 90% sulfur + bentonite fertilizer, 85% sulfur + bentonite fertilizer and 75% sulfur + urea fertilizer.

Sulfur Bentonite Fertilizer is a specialized type of fertilizer that combines sulfur with bentonite clay. This formulation is primarily used to address sulfur deficiencies in soils, which are critical for plant growth, and to improve soil quality. It is particularly beneficial for crops that require sulfur, such as canola, alfalfa, and corn, as sulfur plays a key role in protein synthesis and the formation of essential amino acids in plants.

Sulfur Urea Fertilizer is a type of fertilizer that combines urea, a high-nitrogen compound, with sulfur. This blend is designed to provide both nitrogen (N) and sulfur (S) to plants, addressing two essential nutrients that are crucial for healthy plant growth. The sulfur in this fertilizer is typically in the form of ammonium sulfate or elemental sulfur, and it plays a key role in improving the fertilizer's effectiveness and enhancing crop production.
