According to our (Global Info Research) latest study, the global Sulphur market size was valued at USD 8495.7 million in 2023 and is forecast to a readjusted size of USD 10510 million by 2030 with a CAGR of 3.1% during review period.

Reserves of sulphur are mainly in crude oil, natural gas, and sulfide ores. Most sulphur production is the processing of fossil fuels. About 80% of sulfur consumed was in the form of sulfuric acid, in turn, to make the phosphate fertilizers, ammonium phosphates etc. Sulphur is also used in many other industries including non-ferrous metals, pigments, fibers, carbon disulphide and agricultural pesticides

Petroleum and sulfide ores can be processed long distances from where they produced, therefore sulphur production may not be in the country to which the reserves attributed. For instance, sulphur from Saudi Arabian oil maybe recovered at refineries in United States.

The data is based on commercial sales of sulphur, self-use part not in data statistic scope.

Sulphur is the preferred spelling British English while Sulfur is the preferred spelling in American English. Sulfur equal to Sulphur in this report.

Global Sulphur key players include Saudi Aramco, Gazprom, Abu Dhabi National Oil Company (ADNOC), Canadian Natural Resources, Shell, etc. Global top five manufacturers hold a share about 40%.

Middle East is the largest market, with a share over 30%, followed by CIS and

Americas, both have a share about 40 percent.

In terms of product, Natural Gas is the largest segment, with a share about 55%. And in terms of application, the largest application is Sulfuric Acid (Fertilizers Field), followed by Sulfuric Acid (metal manufacturing field).
