The global Summer Spray Oil market size is expected to reach \$ 177.5 million by 2029, rising at a market growth of 4.6% CAGR during the forecast period (2023-2029).

Summer spray oil, also known as summer dormant oil, is a type of horticultural oil used during the growing season to control pests and diseases on plants. Unlike dormant spray oils, which are applied during the dormant period, summer spray oils are used when plants are actively growing. Summer spray oils are typically lighter in weight and less concentrated than dormant oils, making them suitable for use on foliage without causing damage.
