Teeth grinding (or bruxism) — which is caused by clenched jaw muscles — can happen day or night. Teeth grinding will oftentimes lead to serious oral issues, including loss of enamel, tooth sensitivity, and a proclivity for cavities. Night guards can protect the teeth from significant damage, and may be a recommended treatment for bruxism. However, those who grind or clench the teeth at night should be screened for sleep apnea before being fitted for a night guard.
