The global Sunflower Fatty Acid Distillate (SFAD) market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Sunflower Fatty Acid Distillate (SFAD) is a by-product obtained during the refining process of sunflower oil. Similar to PFAD obtained from palm oil, SFAD is produced during the deodorization step, where sunflower oil is subjected to high temperatures and vacuum to remove odorous substances and free fatty acids (FFAs). The distillation process captures these FFAs along with other minor components that constitute the distillate.
