## Abstracts

According to our (Global Info Research) latest study, the global Sunflower Oil for Cooking market size was valued at US\$ 13009 million in 2025 and is forecast to a readjusted size of US\$ 18193 million by 2032 with a CAGR of 4.9% during review period.

In 2025, global production of sunflower oil for cooking reached 8.21 million tons, with an average selling price of US\$1,540 per ton. Cooking sunflower seed oil refers to edible vegetable oil made from sunflower seeds through processes such as pressing, extraction, refining, degumming, deacidification, decolorization, deodorization, and winterization. It is mainly used for home cooking, frying, baking, cold dishes, food processing, and condiments. Its main characteristics are light color, mild odor, neutral flavor, and the ability to not easily mask the original taste of ingredients. It is suitable for various cooking methods including frying, stir-frying, baking, cold dishes, salad dressing, restaurant kitchens, fast food chains, hotel canteens, snack foods, potato chips, biscuits, cakes, bread, mayonnaise, sauces, canned foods, and pre-made foods. The upstream sector includes sunflower seed planting, harvesting, storage, agricultural inputs, and trade; the midstream sector includes pressing, extraction, refining, winterization, testing, and packaging; and the downstream sector includes home retail, catering, hotel canteens, baking, snack foods, condiments, and food processing enterprises. The gross profit margin ranges from approximately 15% to 35%.

Regionally, Europe and the Black Sea area serve as the core hubs for production and exports, while the Asia-Pacific—particularly China, India, and Southeast Asia—constitutes a major market for consumption and imports. North America demonstrates a preference for high-oleic, non-GMO, and 'clean label' products; conversely, the Middle East and

Africa rely heavily on imports, placing a premium on Halal certification and supply stability. Moving forward, market competition will center on the growth of high-oleic products, the stability of Black Sea supply chains, competitive dynamics among various vegetable oils, the trend toward health-oriented and clean-label products, the expansion of the food service and manufacturing sectors, and price risk management.
