## Abstracts

The global Sunscreen Lip Balm market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Sunscreen lip balm is a type of lip care product that provides protection against the harmful effects of the sun's ultraviolet (UV) rays. It is specifically designed to be applied to the lips, which are prone to dryness and sun damage.

The sunscreen lip balm contains ingredients, such as UV filters or sunscreens, that help to block or absorb UV radiation. These ingredients typically fall into two categories: physical blockers, such as zinc oxide or titanium dioxide, and chemical absorbers, including avobenzone. The lip balm may also contain moisturizing ingredients like shea butter, beeswax, or oils to nourish and hydrate the lips.

When applied to the lips, the sunscreen lip balm forms a protective layer that reflects or absorbs UV radiation, reducing the risk of sunburn, dryness, and potential long-term damage, such as premature aging or lip cancer. It is recommended to apply the lip balm liberally and regularly, especially when spending time outdoors in sunny conditions.
