Super ceramic coating is a semi-permanent or permanent coating that is applied to the exterior of a vehicle to prevent damage to the exterior paintwork. It is a nanoscale paint treatment that is applied in liquid form but cures to form a hard layer over vehicle paint. It is usually composed of silicon dioxide (SiO₂), which is usually derived from natural materials including quartz and sand. When chemicals combine with car paint, they create a hydrophobic (water-repellent) effect. Providing ceramic coatings to vehicle paintwork can help protect and restore your vehicle's paint job, leaving your car looking sparkling.
