Abstracts

The global Super Fine Cobalt Carbonate market size is expected to reach \$ 104 million by 2032, rising at a market growth of 5.9% CAGR during the forecast period (2026-2032).

In 2025, global production of super fine cobalt carbonate reached 3,750 tons, with an average selling price of US\$18/kg. Super fine cobalt carbonate is a cobalt carbonate powder with controlled particle size, low bulk density, and lower impurities, obtained through precipitation, washing, drying, crushing, and classification. It can be used in the preparation of cobalt salt precursors for lithium-ion battery cathode materials, and also in cobalt dyes, ceramic coloring, feed, and chemical reagents. The upstream core raw materials are cobalt concentrate, recycled cobalt resources, or cobalt salt solutions; the midstream involves precipitation, solid-liquid separation, washing, drying, air jet milling, and sieving; the downstream connects to cobalt salts, cobalt oxide, metallic cobalt, lithium-ion battery precursors, ceramic pigments, catalysts, feed, and trace element additives. Gross profit margin ranges from approximately 15% to 30%.

This report studies the global Super Fine Cobalt Carbonate production, demand, key manufacturers, and key regions.
