The global Super Low Shrinkage Yarn market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Ultra-low shrinkage polyester yarn is a polyester fiber with extremely low shrinkage properties. Shrinkage refers to the shortening of fiber length under conditions such as heat or water immersion. The ultra-low shrinkage polyester yarn has been specially treated to make its shrinkage extremely low or even negligible under the influence of these conditions. This characteristic makes ultra-low shrinkage polyester filaments useful in many textile applications, especially for products that require dimensional stability and precision.
