According to our (Global Info Research) latest study, the global Super Phosphate market size was valued at USD 168.7 million in 2023 and is forecast to a readjusted size of USD 229.6 million by 2030 with a CAGR of 4.5% during review period.

Super Phosphate is a Phosphate fertilizer made directly from the decomposition of Phosphate rock by sulfuric acid. The main useful components are the hydrate of calcium dihydrogen phosphate and a small amount of free phosphoric acid, which also contains anhydrous calcium sulfate which is useful for sulfur-deficient soils. Calcium superphosphate contains 14% ~ 20% effective P₂O₅ (80% ~ 95% of which is soluble in water), which is a water-soluble and rapidly available phosphate fertilizer. Gray or gray powder material (or particles), can be directly for phosphate fertilizer. It can also be used as a compound fertilizer.

The market for slide stainers continues to grow as automation and standardization become increasingly important in clinical diagnostics and research laboratories. Demand is driven by the need for efficient and reproducible staining processes.
