## Abstracts

According to our (Global Info Research) latest study, the global Supercapacitor Raw Materials market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

The raw materials of supercapacitors mainly include electrode materials, electrolytes and diaphragm materials. Electrode materials such as activated carbon, carbon nanotubes, and metal oxides, with high specific surface area and good electrical conductivity, are used to store charge. Electrolytes are used for conduction and charge separation between electrodes, and common ones include aqueous solutions, organic solutions, and ionic liquids. Separator materials such as polypropylene film and polyamide film prevent short circuits between electrodes.

In addition to the above-mentioned main raw materials, other auxiliary materials may be used in the manufacturing process of supercapacitors, such as conductive connectors, packaging materials, etc., to ensure the efficient operation and stability of the capacitor.
