## Abstracts

Supercapacitors are a high-capacity capacitor with capacitance values much higher than other capacitors (but lower voltage limits) that bridge the gap between electrolytic capacitors and rechargeable batteries. It is widely used in Energy Storage, Power System and Electronic Device.

Scope of the Report:

This report focuses on the Supercapacitors in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

From the manufacturers of products point of view, the competition between core enterprises is not direct, their products are not completely repeated, with different emphasis and competitive advantage in the market segments.

In terms of product prices, as the technology and application level matures, the overall price of supercapacitor products tends to be rational, and the current price range of products is basically kept within 10% per year. In particular, small-capacity supercapacitor products have basically matured.

The worldwide market for Supercapacitors is expected to grow at a CAGR of roughly 19.6% over the next five years, will reach 4890 million US\$ in 2023, from 1670 million US\$ in 2017, according to a new GIR (Global Info Research) study.
