## Abstracts

According to our (Global Info Research) latest study, the global Supercomputer market size was valued at USD 1230.2 million in 2023 and is forecast to a readjusted size of USD 1916.3 million by 2030 with a CAGR of 6.5% during review period.

A supercomputer is defined as a system that is designed to solve problems or issues that require an extraordinary number of computations across fields such as engineering, science, and business. It is a computing device that is designed for speed rather than for cost-efficiency. The TOP500 List is the benchmark that is attributed to the best and the most high-performing systems in the world and commonly defines market dynamics. A study carried out by industry experts indicate that a number of companies already using supercomputers and unwilling to give up the use of the systems was between the range of 95%-100%.

Business houses, including automakers, chemical manufacturers, drug companies, aircraft manufacturers, oil companies, and energy producers, are increasingly looking to purchase such systems, thus increasing the scope of the global supercomputer market.

The Global Info Research report includes an overview of the development of the Supercomputer industry chain, the market status of Commercial (Linux, Unix), Research Institutions (Linux, Unix), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Supercomputer.
