According to our (Global Info Research) latest study, the global Superconducting RF Cavities market size was valued at USD 242.8 million in 2022 and is forecast to a readjusted size of USD 394.5 million by 2029 with a CAGR of 7.2% during review period.

A cryomodule is a section of a modern particle accelerator composed of superconducting RF (SRF) acceleration cavities, which need very low operating temperatures, often around 2 Kelvin). The cryomodule is a complex, state-of-the-art supercooled component in which particle beams are accelerated for scientific research. The superconducting cavities are cooled with liquid helium. A cryomodule section of an accelerator is composed of superconducting cavities that accelerate the beam, also including a magnetic lattice that provides focusing and steering.
