Abstracts

The global Superconductor market size is expected to reach \$ 866 million by 2032, rising at a market growth of 1.7% CAGR during the forecast period (2026-2032).

Superconductor is a material that can conduct electricity or transport electrons from one atom to another with no resistance. This means no heat, sound or any other form of energy would be released from the material when it has reached 'critical temperature' (T_c), or the temperature at which the material becomes superconductive. However, most materials must be in an extremely low energy state (very cold) in order to become superconductive.

Global Superconductor key players include Luvata, Bruker, Furukawa, Sumitomo, Jastec, etc. Global top five manufacturers hold a share about 80%. Europe is the largest market, with a share about 40%, followed by North America and Japan, both with a share about 30 percent. In terms of product, LTS is the largest segment, with a share about 95%. And in terms of application, the largest application is Electrical Equipment, followed by Medical Equipment, Big Science Project, Defense & Military, etc.

This report studies the global Superconductor production, demand, key manufacturers, and key regions.
