The global Supercritical Fluid Extraction Machine market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Supercritical fluid extraction machine is a device that uses supercritical fluid as a solvent to extract substances. Supercritical fluid refers to the characteristics of both liquid and gas at a temperature and pressure higher than its critical point, and has high solubility and permeability. In the supercritical fluid extraction process, commonly used supercritical solvents include carbon dioxide (CO₂) and ethanol. As green chemistry and sustainability become increasingly important, supercritical fluid extraction technology continues to evolve. The application of supercritical fluid extraction machines in food, medicine, cosmetics, natural products and other fields will continue to expand to meet the needs of different industries.
