According to our (Global Info Research) latest study, the global Superluminescent Source market size was valued at US$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Superluminescent sources (also called ASE sources) are broadband light sources (white light sources) based on superluminescence. They are sometimes erroneously called superfluorescent sources, which would be based on the substantially different phenomenon of superfluorescence. Essentially, a superluminescent source contains a laser gain medium which is excited in order to emit and then amplify luminescent light.
