## Abstracts

The global Supermirrors market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Supermirrors are Bragg mirrors optimized for extremely high reflectivities and low optical losses. Supermirror reflectivities are typically over 99.98% and can even get up to 99.9999% in extreme cases. While dielectric coatings are typically used, this new class of Semiconductor Supermirrors uses a novel crystalline coating technique instead which reduces the scattering and absorption losses to unprecedented levels, while enabling ultralow Brownian noise and high thermal conductivity.

This report studies the global Supermirrors production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Supermirrors, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
