Abstracts

The global Supramolecular Salicylic Acid market size is expected to reach \$ 63.77 million by 2032, rising at a market growth of 8.4% CAGR during the forecast period (2026-2032).

In 2025, global sales volume of supramolecular salicylic acid is estimated at approximately 143 tons, with the mainstream ex-works price at around USD 246/kg. Gross margin of major manufacturers is approximately 45%-70%.

Supramolecular salicylic acid is a mild acid-based functional ingredient formed by using salicylic acid as the core active component and applying supramolecular inclusion, complexation, or self-assembly technology. Supramolecular does not mean that salicylic acid is converted into a completely new chemical molecule. Instead, cyclodextrin, polymer, polyol, deep eutectic system, or other carrier is used to disperse, encapsulate, or complex salicylic acid through non-covalent interactions such as hydrogen bonding, hydrophobic interaction, and inclusion effect. Compared with traditional free salicylic acid, supramolecular salicylic acid retains the functions of oil control, keratin regulation, pore cleansing, and acne-prone skin care, while improving the limitations of poor water solubility, rapid release, relatively strong irritation, and limited formulation compatibility. Therefore, it is more suitable for mild, long-term, and compound functional skincare product.

In terms of product form, supramolecular salicylic acid is usually supplied as a commercial ingredient with different salicylic acid content, such as 10%, 30%, and 40%, and may also be provided as aqueous solution, inclusion complex, gel, or compound active solution. Its core value lies in improving user-friendliness through sustained release and stable delivery, reducing discomfort such as stinging, dryness, and peeling,

and enhancing its application convenience in aqueous system, gel system, and compound functional formulation.

From the perspective of market application, supramolecular salicylic acid is mainly used in segmented scenarios such as acne-prone skin care, pore management, keratin regulation, scalp oil control, and body acne care. Typical product includes acne care serum, oil-control gel, toner, facial mask, cleanser, anti-dandruff and oil-control shampoo, and back acne care product. As functional skincare shifts from strong-irritation and short-cycle acid treatment toward milder, more precise, and long-term care, supramolecular salicylic acid is expected to further expand its application potential in functional skincare and scalp care formulation, supported by better mildness, formulation compatibility, and consumer acceptance.
