## Abstracts

According to our (Global Info Research) latest study, the global Suraputide market size was valued at US\$ 18.67 million in 2025 and is forecast to a readjusted size of US\$ 540 million by 2032 with a CAGR of 16.8% during review period.

Suraputide is an innovative long-acting GLP-1 receptor agonist independently developed in China. By activating the GLP-1 receptor, it promotes insulin secretion and inhibits glucagon release in a glucose-dependent manner, thereby effectively lowering blood glucose. It also exerts effects of delaying gastric emptying, suppressing appetite, reducing body weight, and providing potential cardiorenal protection. The drug achieves long-acting activity through Fc fusion protein technology and is administered by subcutaneous injection once weekly. It is mainly indicated for glycemic control in adults with type 2 diabetes mellitus. As the first domestically invented long-acting GLP-1 analogue approved in China, it features favorable safety, convenient administration and high compliance, and offers important clinical value for potential expansion into indications such as obesity and metabolic syndrome. In 2025, global Suraputide production reached approximately 300,000 vials.

As the first domestically developed long-acting GLP-1 receptor agonist in China, suraputide operates in a rapidly expanding and highly competitive market for metabolic disease drugs. With the convenience of once-weekly administration, favorable safety profile, and locally tailored pricing advantages, the product has quickly entered the field of type 2 diabetes treatment since its launch. Its inclusion in medical insurance has further boosted both market coverage and patient accessibility. Although the current market is dominated by international pharmaceutical giants, accompanied by intensified competition among similar products and pressure on pricing, suraputide has established distinctive competitiveness in the two core sectors of diabetes and weight management

by relying on its differentiated Fc fusion protein technology, as well as local R&D and commercialization strengths. In the long run, with the gradual expansion of indications to include obesity and metabolic syndrome, the advancement of overseas market deployment, and the rising penetration rate and consumption upgrade of GLP-1 drugs in China, the product is expected to continuously expand its market share in the trillion-level market and become an important benchmark for domestic innovative drugs in the field of metabolic diseases.
