Surface-active polyether monomers are compounds with surfactant properties, primarily used in the production of surfactants. These monomers, formed through block polymerization, possess both hydrophilic and lipophilic groups, enabling them to effectively reduce the surface tension of liquids. They are widely used in detergents, wetting agents, emulsifiers, dispersants, and other industrial applications, including personal care products, textiles, coatings, and agrochemicals. Surface-active polyether monomers maintain their performance under various pH and temperature conditions and are essential raw materials for producing non-ionic and amphoteric surfactants.
