Surface Binding Assay Microplates are laboratory tools designed for conducting assays that involve the binding of molecules to a surface. These microplates typically have wells with surfaces that facilitate the immobilization of specific biomolecules, such as proteins, antibodies, or nucleic acids. Researchers use these plates to study interactions between molecules, screen for drug compounds, or analyze biomolecular binding kinetics. The microplate format allows for high-throughput experiments, making it efficient for analyzing numerous samples simultaneously. Surface Binding Assay Microplates are crucial in drug discovery, molecular biology, and various research applications where understanding molecular interactions is essential.
