According to our (Global Info Research) latest study, the global Surface Lifts market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Surface lifts are a type of ski lift used in winter sports resorts to transport skiers and snowboarders uphill. Unlike chairlifts or gondolas, which carry riders above the ground, surface lifts operate on the snow surface. They are especially common on beginner slopes and in areas with gentle terrain. There are several types of surface lifts, including: T-Bar, J-Bar and rope tow, etc.

Surface lifts are particularly useful for beginners because they are relatively easy to use and don't require riders to manage the complexities of getting on and off a chairlift. However, they are generally slower than chairlifts and may not be suitable for transporting large numbers of people or reaching high elevations.
