Abstracts

The global Surface Mount Capacitive Touch Sensor market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

In surface mount capacitive touch sensors, the insulator is coated with a conductive coating on one side of its surface, and the current is applied to all corners of the conductive coating. When an external conductor like a human finger comes into contact with a surface, capacitance forms between them and draws more current from the corner. The currents are measured at each corner and their ratio will determine where the touch is placed on the surface for durability, solidity and an attractive appearance.
