Abstracts

The global Surface Mount Component Reflow Oven market size is expected to reach \$ 472.8 million by 2029, rising at a market growth of 3.9% CAGR during the forecast period (2023-2029).

Surface-mount component reflow ovens have become an essential piece of equipment or part of the surface mount technology process and both small and manufacturing units cannot do without these soldering machines as they do not want to compromise on the quality of their electronic products or devices. The growing global demand for compact electronics is becoming a key factor stimulating the growth of the global reflow oven industry, and with the rapid penetration of digitalization, this trend is expected to further escalate in the next decade. Reflow ovens are increasingly used in industries such as consumer electronics, automotive and telecommunications to produce electronic components and assemblies. These welding systems make the welding process faster, increase throughput, and help reduce costs. Increasing production and export of electronic products such as smartphones, computers, chips, medical devices, etc. will act as a catalyst for the development of the reflow oven market during the assessment period, rapid shift towards alternative energy sources such as solar energy, and growing awareness of lead used in traditional soldering techniques. Rising awareness of the environmental risks posed by and other hazardous elements will boost reflow oven sales over the next decade.

A surface-mount component reflow oven is a machine used primarily for reflow soldering of surface mount electronic components to printed circuit boards (PCBs).
