According to our (Global Info Research) latest study, the global Surface Mount FPGA market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Surface Mount FPGA is an integrated circuit chip, which is usually used to realize the design and implementation of digital circuits. FPGAs can be reprogrammed at design time, providing a high degree of customizability and flexibility. Surface mount means that these chips can be soldered directly to the surface of a printed circuit board (PCB) without being inserted into a socket. This makes them easier to integrate into the board's design and reduces board size and weight. Package types commonly used in surface mount FPGAs are QFN, BGA, LGA, etc.
