The global Surface Mount Linear Regulators market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A surface mount linear regulator is an electronic component that is typically used to convert an unstable input voltage, such as from a battery or variations in an AC power source, to a constant and controllable output voltage. They are widely used in electronic equipment, such as consumer electronics such as televisions, computers, and mobile phones. These regulators provide the required voltage stably and protect the circuit from voltage fluctuations. Surface mount linear regulators are characterized by their small size and low power consumption, making them ideal for electronic equipment that requires high efficiency and high performance. In addition, surface mount linear regulators are also easy to manufacture and install.
