## Abstracts

The global Surface Mount Low Dropout Regulators market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A surface mount low dropout voltage regulator is an electronic component that is mounted on the surface of a circuit board using surface mount technology to provide a stable voltage. Unlike through-hole mounting, surface-mount low-dropout regulators do not require through-holes to connect different layers of the board, thus saving more space and increasing the density of the board. Surface mount low dropout voltage regulators are usually available in small form factor designs that provide high efficiency and high precision voltage regulation. These components typically have a small input and output voltage difference, typically less than 0.5 volts. Surface mount low dropout voltage regulators are widely used in consumer electronics such as mobile phones, tablets, laptops, digital cameras, etc. to provide stable power.
