## Abstracts

The global Surface Mount Technology (SMT) Assembly Line market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Surface Mount Technology (SMT) Assembly Line is an electronic manufacturing process used to place electronic components on a Printed Circuit Board (PCB). Compared to the traditional Through-Hole Technology (THT) assembly line, the SMT assembly line has a higher degree of automation and higher production efficiency.

The SMT assembly line typically consists of multiple workstations, each with different functions. In the SMT assembly line, electronic components are precisely placed on the PCB and fixed through a reflow soldering process. During this process, the soldering furnace heats the entire PCB to a sufficient temperature to melt the solder and connect the components and the PCB.

The SMT assembly line typically includes the following workstations:

**Programming:** converting the design files of the PCB into machine-understandable instructions.

**Pick-and-Place:** placing electronic components on the PCB. This is usually done by robots.

**Soldering:** connecting the components to the PCB using the reflow soldering process.

**Inspection:** checking if the components on the PCB are correctly connected and

correcting any issues.

Packaging: packaging the PCB as finished products, ready for shipment.
