Surface Mounted Device (SMD) Bobbin is a type of bobbin used for surface-mounted electronic components, particularly in the manufacture of various SMD inductors and transformers. These components are typically installed by soldering them onto circuit boards through surface mounting, hence the requirement for miniaturization and lightweight designs. SMD bobbins are commonly made of plastic or ceramic and can be customized based on application requirements. SMD bobbins are commonly used in high-frequency applications such as digital products, communication equipment, LED lighting, and power supplies. Due to the efficient manufacturing and assembly provided by SMD bobbins, they have become one of the mainstream products in the electronics industry.
