According to our (Global Info Research) latest study, the global Surface Temperature 1500? U-Shaped Silicon Carbide Rod market size was valued at US\$ 32.91 million in 2025 and is forecast to a readjusted size of US\$ 52.05 million by 2032 with a CAGR of 6.9% during review period.

In 2025, global production of Surface Temperature 1500? U-Shaped Silicon Carbide Rod reached 780,000 units, with an estimated average selling price of US\$41 per unit. A Surface Temperature 1500? U-Shaped Silicon Carbide Rod refers to a U-shaped silicon carbide non-metallic heating element whose outer surface temperature can reach approximately 1500 ? under rated voltage, resistance, and furnace conditions. It is usually made of high-purity green silicon carbide as the main raw material, and is manufactured through blanking, high-temperature siliconization/recrystallization, sintering, resistance sorting, and end metallization treatment. Structurally, it consists of two silicon carbide rods with matched resistance connected by a bridge to form a U-shape, so that the two terminals are located on the same side of the furnace body, which is convenient for single-sided wiring, top insertion, or installation in narrow furnace chambers. It is mainly used in industrial electric furnaces that require high temperature, uniform and rapid heating and convenient single-end wiring, including ceramic sintering furnaces, glass heat treatment furnaces, powder metallurgy furnaces, magnetic material sintering furnaces, laboratory high-temperature furnaces, box furnaces, bogie furnaces, pusher furnaces, and roller kilns. The upstream of the industry chain mainly includes green silicon carbide powder, petroleum coke/silicon/carbon materials, binders, aluminum spraying materials, ceramic insulation components, fixtures, and packaging materials; the midstream includes silicon carbide rod forming, sintering/recrystallization, resistance sorting, end metallization, size customization, and

furnace heating element assembly; the downstream includes industrial furnace manufacturers, ceramic and refractory material companies, glass companies, powder metallurgy and metal heat treatment companies, electronic ceramics/semiconductor material companies, and laboratory equipment manufacturers. Gross profit margins range from approximately 20% to 40%.
