Abstracts

According to our (Global Info Research) latest study, the global Surfacing Veils market size was valued at US\$ 436 million in 2025 and is forecast to a readjusted size of US\$ 621 million by 2032 with a CAGR of 5.3% during review period.

Surfacing veil, also called surface mat/tissue, is a thin, lightweight layer of fiberglass that is used as a surface layer in composite materials. Surfacing veils strengthen the resin-rich surface of composite parts, creating a strong bond with the underlying laminate and enhancing surface appearance by masking the reinforcing fiber pattern. This reduction in pattern print-through allows for the highest quality surface to last over time.

This report only counts fiberglass surfacing veils, because the surfacing veils of mainstream suppliers are fiberglass veils.

The Surfacing Veils market is growing steadily, driven by increasing demand in composites for corrosion resistance, surface aesthetics, and durability. Key sectors include wind energy, pipelines, marine, automotive, and construction. Manufacturers seek high-performance veils to enhance resin-rich surfaces, improve bonding, and reduce fiber print-through. Emerging applications in aerospace and electronics also contribute to growth.

Owens Corning, Johns Manville, CPIC, Freudenberg Performance Materials, Jiangsu Changhai are the top five manufactures in the global Surfacing Veils market. In terms of output value, Owens Corning is the largest manufacturer, its revenue share of global market exceeds 21.22% in 2024. The global Surfacing Veils market is highly competitive, with the top 10 manufacturers accounting for approximately 79.22% of the
