## Abstracts

According to our (Global Info Research) latest study, the global Surfacing Water Wall market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

The water-cooled wall is a vertical single-row parallel tube arranged against the wall around the boiler furnace. Water vapor continuously flows in the tube, absorbs the radiant heat of the flame and vaporizes, and prevents the wall temperature of the furnace wall from being too high. It is the most important pressure-bearing part of the boiler. , one of the heat exchange components. The heating surface of the water-cooled wall has been exposed to high temperature, high pressure and complex flue gas environment for a long time, and is extremely susceptible to corrosion and wear. Surfacing water-cooling wall uses surfacing technology to deposit alloy materials with certain performance properties on the heating surface of the water-cooling wall, so that the heating surface of the water-cooling wall has special properties such as anti-corrosion, anti-wear, high temperature resistance, and high pressure resistance.

Surfacing technology has obvious advantages in the bonding strength of the anti-corrosion layer, protection stability, and service life. It can realize safe, stable, long-term, and high-efficiency operation of industrial equipment in complex environments such as strong corrosion, easy wear, high temperature, and high pressure. It can reduce equipment maintenance, replacement losses and downtime losses. With the advancement of technology, the improvement of production capacity and the improvement of production efficiency, surfacing technology has been industrialized in the field of waste incineration power generation, and has been implemented in biomass power generation, coal-fired power generation, chemical industry, energy, metallurgy,

papermaking and other fields. With good application, it has gradually become the mainstream technical route for anti-corrosion and anti-wear of industrial equipment in complex environments such as strong corrosion, easy wear, high temperature, and high pressure, and the risk of being replaced is small.
