Abstracts

The global Surge Check Valve market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The surge check valve is designed to be installed at the inlet of existing air and vacuum valves on pipelines. It consists of a valve body, valve seat, flow disc and compression spring. The surge check device will operate in phase between the kinetic energy of air and water and the relative velocity flow. The surge relief angle valve is designed to open when the system pressure exceeds the set closing pressure of the valve flap to prevent water hammer damage in the system. When the valve flap opens, the surge pressure rise that caused it to open overflows and dissipates through the open valve.

This report studies the global Surge Check Valve production, demand, key manufacturers, and key regions.
