Surgical Energy Equipment is a type of medical device that uses a specific form of energy (such as electrical energy, ultrasound, radio frequency or high-frequency current) to perform surgical operations. They achieve functions such as tissue cutting, coagulation, evaporation, hemostasis or cauterization by precisely controlling the release of energy, thereby achieving the purpose of treatment and surgical operations. The advantages of Surgical Energy Equipment are that it can reduce damage to surrounding tissues, improve surgical accuracy, and reduce bleeding and post-traumatic recovery time. Common energy surgical instruments include electric knives, ultrasonic knives and plasma knives, which are widely used in various surgical operations, such as tumor resection, vascular surgery, ophthalmic surgery, etc.
