Abstracts

Medical Imaging devices are used to produce images of the internal aspect of the body. These devices are used to detect issues to the tissue level and help a lot in designing treatment and surgical procedures to be carried out in the future. A Surgical G-arm is a medical imaging device that is associated with x-ray technology. Surgical G-arm has a movable stand and x-ray source and detector for frontal and lateral view. The attached patient table has an extension facility and the stand can be fixed at a specific position during the surgical procedure for obtaining the image of both planes. With the feature to combine a pair of x-ray chains to obtain a view of both planes simultaneously, the demand for a Surgical G-arm is increasing.
