## Abstracts

The global Surgical Gloves market size is expected to reach \$ 2960 million by 2032, rising at a market growth of 8.2% CAGR during the forecast period (2026-2032).

Surgical Gloves are personal protection equipment (PPE) designed to protect clinicians in operating room (OR) environments. The primary purpose of surgical gloves is to act as a protective barrier for surgeons and nurses to prevent possible transmission of diseases or pathogens during procedures while working with surgical instruments. Similar to medical examination glove, surgical glove standards are governed by the Food and Drug Administration (FDA) within the United States. However, the FDA requires manufacturers to meet a higher level of quality standards for surgical gloves. All surgical gloves are sterilized and package sealed in pairs for individual use. The sterilization of surgical gloves is standard as surgical procedures often involve open wound operation. Today, surgical gloves are made from a variety of materials which include latex, polyisoprene, neoprene, and nitrile. Surgical Gloves are more difficult to produce because they need two molds instead of one, the fingertips need to be bent, sterilization is a bigger issue and thickness is higher.

Global manufacturers of surgical gloves are Ansell, Top Glove, Medline Industries, Cardinal Health, Molnlycke Health Care and Kossan. And the top five manufacturers account for about 79% of the global share. Asia Pacific is the largest market with about 31% share. In terms of product type, natural latex gloves are the largest segment with a share of about 58%. In terms of application, hospitals are the largest downstream segment with a share of 88%.

This report studies the global Surgical Gloves production, demand, key manufacturers, and key regions.
