## Abstracts

The global Surgical Ligation Clip market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A surgical ligation clip is a medical device used in surgery to clamp and occlude blood vessels, ducts, or other hollow structures in the body. It is commonly made of titanium, which is known for its strength, durability, and biocompatibility. The clip is typically applied to the structure being occluded using surgical forceps, which allow the surgeon to manipulate and position the clip accurately. Once in place, the clip compresses the vessel or duct, preventing the flow of blood, fluids, or other substances. Surgical ligation clips are commonly used in a variety of surgical procedures, including gall bladder removal, sterilization surgeries, and vascular surgeries. They are favored by surgeons for their speed, ease of use, and effectiveness, compared to other ligation methods.

This report studies the global Surgical Ligation Clip production, demand, key manufacturers, and key regions.
